XITRON

NAVIGATOR
▶ RIP
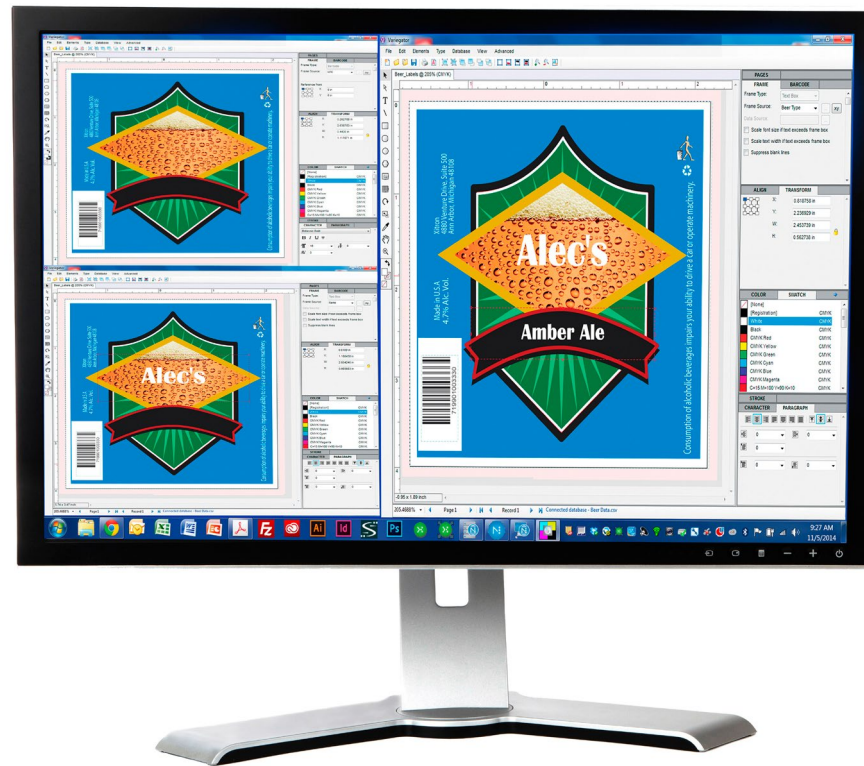

Trojanlabel

Key features:

Graphic Merge Tool
A simple variable data tool which allows the merging of graphics onto a background image.

Color management
Including three distinct color tools. ICC profiling, spot color editing and replacement, and global color adjustment 'sliders'. Color edits are able to be saved into a database.

Client control and job management
Mac and Windows clients allow job tracking, re-queuing, color editing, copy count control, and more from networked computers.

Imposition
Step & Repeat and other common label positioning features. Including the ability to add trim and cut marks if desired.

Soft Proof viewer
An optional step which makes it possible to see the job after it has been ripped, but prior to output. The viewer works over the network from either Macintosh or Windows.

Add-on:
Variegator - Variable Data tool
A variable data production system which supports variable text, barcodes, graphics and color.

Customized for

Trojan ① Trojan ②
